DETAILED ACTION

1. Amendment filed on 11/02/04 has been received.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 and 8-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franklin in view of Schwemmer (U. S. Patent no. 5,396,973).

Franklin discloses:

Damper 120,130, electronic control module 160, Calibration data stored in memory 609 (nonvolatile EEPROM) determined from testing of the damper see column 11 lines 5-25, servo 221

Regarding claim 2 and 14, Controller is able to determine the type of damper used see column 13 lines 18-20 and thus inherently there must be an identification tag of some type.

Franklin does not disclose the memory physically attached to the shock absorber.

Schwemmer teaches an electronic module (22 module, damper 20) with memory physically on the shock absorber. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the memory physically mounted on the shock absorber as taught by Schwemmer in the shock absorber of Franklin as such is merely a design choice and allows for fewer separate pieces to be installed.

Response to Arguments

4. Applicant's arguments filed 11/2/04 have been fully considered but they are not persuasive. Applicants argue that Franklin does not anticipate a plurality of shock absorbers. Applicants are NOT claiming a plurality of shock absorbers and therefore the argument is irrelevant. Applicants argue that Schwemmer teaches away from the use of a central controller. Franklin discloses the use of a central controller and a memory distinct from the controller associated only with that specific damper. Schwemmer is merely used to teach that the memory that Franklin already discloses can be physically mounted on the damper itself.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
